FABRICBOT API & Partners

Add Telegram Wallet checkout to your website — and get referrals tracking and instant stores TMA building for 60 seconds in our app

What we offer to you? Shortly?

FABRICBOT is a **Telegram Mini App** where you can launch a shop in minutes: create an offer, set a price, and start accepting **Telegram Wallet payments**. Everything runs through a **TON smart contract**, so payments and rules are executed transparently on-chain.

Referrals are built in: **partners share your link, sales are attributed automatically, and CPA rewards** are tracked and paid out without manual work. You can also be discovered through a shared catalog, so others can recommend you without you spending money on a website or marketplaces on day one.

When you need deeper integration, FABRICBOT provides an **Open API** to plug the same checkout and partner flow into your website or product.

CPA model and referral system can bring your clients faster

A huge number of users already live inside Telegram and many already have a wallet — but most businesses still don't give them a frictionless way to pay on external surfaces like websites and apps.

That creates a silent leak: customers don't reject your offer, **they simply don't complete the checkout because the flow is unfamiliar, slow, or requires extra steps.**

When the button isn't there, you lose conversions from people who are literally ready to pay.

Choose Payment Method

cloud payments

Cloud Payments

Ton (FabricBot)
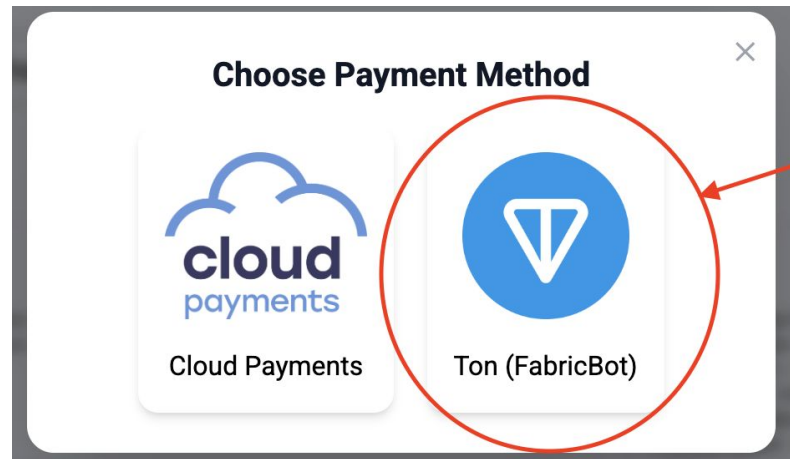

How we have solved this?

Usually business forget about it because it's not "just payments". To do it properly you need: web → Telegram confirmation, reliable status updates for orders, tracking, and a **clean partner/referral system with payouts.**

If you build it yourself, you'll spend weeks on edge cases, maintenance, and manual reconciliation. If you use random gateways, you often get "a transfer", not a smooth Telegram-native checkout experience.to pay. FABRICBOT is **one standardized stack that connects three things t**hat usually live separately.

So merchants can accept payments cleanly — and partners can bring sales and get paid without spreadsheets.

How it will help to grow your business?

1. **Higher conversion:** customers pay in one tap via Telegram Wallet, with less drop-off.
2. **Faster launch:** start selling in minutes with an instant shop inside Telegram.
3. **Partner-driven growth:** referrals/CPA are built in, tracked automatically, and ready to scale.
4. **Automatic payouts:** rewards are calculated and paid without manual reconciliation.
5. **Free distribution layer:** get discovered via shared catalog and recommendations inside the ecosystem.
6. **Lower costs, more focus:** no need to build a website or marketplace setup on day one — focus on product and sales.

# Open API (integrate FABRICBOT into your product)

FABRICBOT includes an **Open API** so you can embed the same Telegram Wallet checkout and partner/referral logic directly into your **website or SaaS**.

You get real-time payment statuses via **events/webhooks**, clean order tracking, and a standardized flow — without rebuilding payments from scratch.
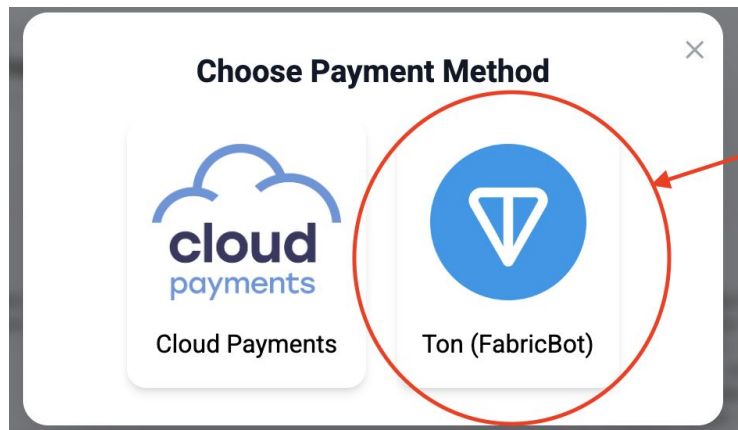

Become a partner and launch your store in minutes

Start accepting Telegram Wallet payments, activate referrals, and get listed in the ecosystem catalog.

Tap **"Partner Onboarding"** inside the Mini App — we'll reply with the fastest setup path for your case.
